

# Electricity Consumption Report FY2025

## Electricity Consumption Report by Sydney, Central Coast, Hunter & Upper Hunter LGA and Suburbs 2024 - 2025

Ausgrid is providing the following data on electricity consumption within our network area to be used in developing applications or by researchers. The data is from customer billing data and grouped by local government areas (LGA) and Sydney, Central Coast and Upper Hunter suburbs in Ausgrid's network.

Annual electricity consumption data by LGA and suburbs' is crucial for optimizing energy management, reducing costs, promoting sustainability, informing effective policy decisions, and fostering sustainable communities. For utility companies, this data helps in understanding regional usage patterns, enabling more efficient energy distribution and infrastructure planning. By analysis consumption trends, utilities can identify areas with high demand and potential for energy-saving initiatives, ensuring a stable and reliable power supply. For local governments and policymakers, this data is essential in designing effective energy policies and regulations. It allows them to target specific suburbs with tailored programs to promote energy efficiency and reduce overall consumption. This can include incentives for renewable energy adoption, energy-efficient building codes, and public awareness campaigns. From an environmental perspective, understanding suburbs' electricity consumption is key to reducing carbon footprints and promoting sustainability. Accurate data supports the development of localized strategies to decrease reliance on fossil fuels and increase the use of renewable energy sources. Community-wide initiatives, such as bulk purchasing of energy-efficient appliances or solar panels installations, can be more effectively organized with accurate consumption data.

Average electricity consumption by geographic area can vary significantly due to several factors. These include differences in climate, the use of natural gas, the type of housing (house or apartment), type of business (commercial or industrial), and varying household socio-demographic or business types.

### Electricity Consumption notes:

1. The electricity consumption data shown is for customers in Ausgrid's network area for the 2024-25 financial year.
2. Electricity consumption data for all metered low voltage customers has been split into two categories:
  - i) 'Residential consumption' refers to electricity used from the grid in residential properties.
  - ii) 'Non-residential LV consumption' refers to non-residential customers supplied at low voltage with annual consumption from the grid.
3. "High voltage customers" are large non-residential customers connected at 11 kV or greater (eg. large industry, mining, transport infrastructure, utility infrastructure, some large universities and hospitals).

Note: We have chosen not to release the information for high voltage customers by LGA due to confidentiality concerns
4. Year to year changes are strongly influenced by weather and other factors on business energy consumption. Data has not been corrected for weather variations or other factors.
5. Data should be used with caution when comparing with ABS data or other external data sources.
6. The threshold used for merging data is when a suburb has less than 55 residential electricity meters or when it has less than 15 non-residential electricity meters.
7. Where no electricity consumption (residential or non-residential) is shown for a suburb, the reason for this is that the number of meters is below the thresholds described in the previous note. Where a suburb appears more than once, the reason for this is that the suburb spans one or more LGA areas.

If you are looking for ways you can reduce your bill check our Energy Saving resources at [Ausgrid.com.au/waystosave!](https://ausgrid.com.au/waystosave/)

For help in interpreting the data, please contact [sharinginformation@ausgrid.com.au](mailto:sharinginformation@ausgrid.com.au)
